EXPERIENCE

Software Engineer, Stanwich Energy *Jun 2026 - Present*

- Develop an internal energy platform integrating live market data with client accounts, contracts, hedges, and utility billing using PHP, JavaScript, and Python.
- Redesigned energy-market dashboards covering power grid load, fuel mix, natural gas storage, and weather forecasts.
- Rebuilt account and billing tools analysts use to manage client usage, invoices, and capacity/transmission tags.
- Built AWS Lambda invoice automation and a PDF engine for client reports, supporting billing and reporting workflows.

Co-Founder & Software Engineer, Wolfen Consulting Services *Jan 2026 - Present*

- Extend a construction management platform using Next.js, TypeScript, Prisma, and SQL Server, implementing scheduling, document processing, and subcontract workflows for an Azure-hosted pilot.
- Implemented a shared SQL Server subcontract register with precise currency handling, idempotent writes, optimistic concurrency controls, and verified database migrations.
- Built and deployed Model Context Protocol (MCP) services connecting AI assistants to NCR Counterpoint inventory and sales data and Microsoft 365 through SQL Server and REST APIs.
- Engineer approval-based inventory updates and invoice-processing workflows with data validation, audit trails, and safeguards against duplicate requests and conflicting edits.
- Implement backend APIs and web interfaces for AI coding observability, including session transcripts, tool-call traces, usage dashboards, and filterable session histories.
- Extend telemetry processing with approval decisions, sandbox outcomes, and session settings; flag prompts containing masked credentials for security review.
- Develop Go-based sensor components for macOS and Windows, including software discovery, coding-agent telemetry, and secure event collection.
- Automate analytics reporting across Google Search Console, GA4, and Cloudflare, generating client-specific HTML reports and CSV exports.

Automation Engineering Intern, Butter AI *Feb 2026 - Jun 2026*

- Built a four-stage n8n pipeline processing approximately 333 articles per week from 12 RSS feeds, using LLM relevance scoring to filter sources before extraction with Firecrawl and OpenAI APIs.
- Automated research, writing, image generation, and publishing, eliminating 15+ hours per week of manual content production.

PROJECTS

Email Phishing Detection System | Python, FastAPI, Docker, GitHub Actions

- Built an email classification application with a 175-feature pipeline, SHAP explanations, a FastAPI backend, an IMAP monitor, and a feedback loop for model retraining.
- Achieved 98.6% classification accuracy and 0.999 AUC-ROC in model evaluation; deployed the application with an automated CI/CD pipeline.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, PHP, Go, SQL, Java, C

Frameworks and tools: Next.js, Node.js, FastAPI, Prisma, REST APIs, MCP, n8n

Data and infrastructure: SQL Server, AWS Lambda, Azure, Railway, Docker, Git, GitHub Actions, Linux

EDUCATION

Skidmore College, Saratoga Springs, NY *May 2026*

B.A. in Computer Science | Minor in Economics | Major GPA: 3.8
