EXPERIENCE

Software Engineer, Stanwich Energy *Jun 2026 - Present*

- Rebuilt a JavaScript utility-billing editor with spreadsheet formulas, bulk paste, and undo/redo; validated row virtualization against 36K+ bill records.
- Rebuilt real-time load and peak-risk dashboards across six power markets using bounded MySQL queries, testable PHP calculations, and JavaScript charts.
- Extracted a shared Python bill loader for AWS Lambda; verified unchanged dry-run results across 430 bills.
- Built a Node.js/Puppeteer PDF engine callable from PHP, supporting batch rendering and structured errors; fixed hangs caused by browser disconnects.

Co-Founder & Software Engineer, Wolfen Consulting Services *Jan 2026 - Present*

- Extended a construction management platform with scheduling, document processing, and subcontract workflows using Next.js, TypeScript, Prisma, and SQL Server; released features to an Azure pilot.
- Implemented a SQL Server subcontract register with idempotent writes and optimistic concurrency to prevent duplicate submissions and lost updates; verified migrations preserved existing records.
- Built and deployed TypeScript Model Context Protocol (MCP) services for NCR Counterpoint and Microsoft 365, exposing inventory, sales, email, and calendar data through SQL Server and Microsoft Graph APIs.
- Built invoice extraction and item-matching workflows; engineered inventory updates with validation, stale-data checks, explicit approvals, and audit trails for controlled changes to business records.
- Implemented tenant-scoped APIs to reconstruct AI coding sessions from telemetry and pair tool calls with results; built searchable transcripts and usage dashboards.
- Implemented macOS installation, enrollment, and service lifecycle in a Go telemetry agent; built Windows discovery and access-controlled event processing.

Automation Engineering Intern, Butter AI *Feb 2026 - Jun 2026*

- Engineered a four-stage n8n pipeline processing approximately 333 articles per week from 12 RSS feeds; integrated OpenAI and Firecrawl APIs to score relevance and extract structured content.
- Automated research, writing, image generation, and publishing, eliminating 15+ hours of manual work per week; filtered low-relevance articles before extraction to avoid unnecessary API calls.

PROJECTS

Email Phishing Detection System | Python, FastAPI, Docker | Code | Live app

- Engineered a 175-feature classifier combining 47 email-security signals with 128-dimensional LSA embeddings; added SHAP explanations for individual predictions.
- Built a FastAPI application with IMAP monitoring, SQLite history, and feedback-driven retraining; deployed with Docker on Hugging Face Spaces and automated CI checks with GitHub Actions.
- Reported 98.6% accuracy and 0.999 ROC-AUC on offline email benchmarks using a Random Forest classifier.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, Go, PHP, SQL

Frameworks: Next.js, Node.js, FastAPI

Data and ML: MySQL, SQL Server, SQLite, Prisma, scikit-learn, SHAP

Cloud and tools: AWS Lambda, Azure, Docker, Git, GitHub Actions, Linux

EDUCATION

Skidmore College, Saratoga Springs, NY *May 2026*

B.A. in Computer Science | Minor in Economics | Major GPA: 3.8
